REVOLUTIONARY EDUCATIONAL DESIGN

**RED**  
LINE

The RED-Line is a self-confident statement in microscope hardware. Motic, as an experienced manufacturer of microscopes, has listened carefully to the special demands of the educational market. Unexperienced users will need reliable and easy-to-use instruments with repeatable image results to take their first steps into the “world of small things”. Taking these special requirements into consideration, this catalogue presents a complete new line of biological and stereo microscopes. New illumination technologies and further clever ideas with focus on young users have been implemented to make microscopic teaching more simple and effective.

# REVOLUTIONARY EDUCATIONAL DESIGN

Once again Motic with its RED-Line strides ahead of the competition by offering quality instruments for a limited budget. Our 10-Year Limited Warranty is supported by a complete parts inventory that assures availability even beyond the warranty period. A Motic microscope is therefore a solid investment that will pay off with years of hassle-free and effective work.

# RED100 SERIES

THE RED100 SERIES REPRESENTS THE IDEAL MICROSCOPE LINE FOR PRIMARY, SECONDARY AND HIGH SCHOOL STUDENTS

Student dedication of the RED100 Series starts with the microscope head. Depending on budget and teaching situation, monocular, dual-view or binocular options are available. For easy storage in a cabinet, the eyepiece tubes may be rotated 180°. The fixation by a countersunk screw prevents inadmissible removal by students.

The well positioned focus controls can easily be found by following the curves of the microscope stand. A relaxed seating position allows an intuitive evaluation of the sample by the coaxial coarse/fine focus mechanism. The convenient carrying handle on the back of the stand simplifies storage or just transport.

The optics of a microscope of course is the most important component for an instructive teaching. Motic supplies his RED100 Series with high quality EA objectives; Achromats with good colour reproduction, contrast and a time saving field flatness: flat samples like sections or smears can be evaluated fast and efficiently. The reversed positioning of the nosepiece gives good space for placing or exchanging the glass slides, avoiding the risk of damaging the sample or the objectives.

The standard WF10X/18mm eyepieces work perfectly fine with the EA Achromats. In binocular packages, diopter adjustment is possible on the left eyepiece tube. An eyepiece pointer is integral part of any RED100 package, allowing the teacher to point out regions of interest to the student. In order to prevent un-authorized removal, again countersunk screws fix the eyepieces and help to keep the equipment complete.

All RED100 microscopes incorporate a cordless LED illumination. Especially in educational environments, LEDs display several advantages over the traditional halogen bulbs: extended life time (>10.000 hours), no heat development (improved user safety), low power consumption (one single charge provides 70 hours of use) and a modern sensation of colour without corrective blue filter.

LED 20mA, 3.5V, 70mW

# RED200 SERIES

THE RED200 SERIES IS DESIGNED FOR ADVANCED BIOLOGY STUDENTS, TEACHERS AND LAB TECHNICIANS

The RED200 Series features the comfortable Siedentopf head concept with an interpupillary distance from 55-75mm. To compensate sight defects, the left eyetube allows a diopter adjustment of +/- 5 dpt.

The advanced level of the RED200 Series is also underlined by the large and heavy microscope body which ensures better stability, especially when adapting a camera. The large coaxial focusing controls are easily accessible; the fine focus drive has a minimum increment of 2µm for smooth and precise focusing “through” the sample. The cord-hanger at the back of the microscope helps in case of transport or storage, just wind up the cable.

The RED200 Series also displays an improved level of optical performance. Motic's Semi-Plan (SP) objectives deliver a supreme contrast with crisp and clear images over a large field of view (20mm). All microscopes come with a set of 4X, 10X, 40X and 100X/Oil objectives to cover the regular magnification range. No need to say that 40X and 100X-Oil objectives come with an integrated spring mechanism, preventing damage to the front lens and specimen in case of unexperienced users.

To transform your microscope into a presentation station for teaching purposes, a trinocular microscope version is recommended. The RED223 and RED233 packages already include an 0.5X c-mount for the simple adaption of a digital camera.

# RED30 SERIES

A STEREO MICROSCOPE SERIES OF SUPERB PERFORMANCE; IDEAL FOR FIRST STEPS INTO THE WORLD OF MICROSCOPY

Stereo microscopes have got the best preconditions for an easy access to microscopy. No need for sample preparation, just take a flower from the school garden or an insect from the window bench. Low magnifications allow the student to understand the next smaller dimension step, an upright image helps in orientation.

Motic's RED30S implements a 2-step magnification changer for both sample overview and detail information. A more convenient approach is presented by the 1:3 zoom optics of the RED39Z. Both stereos come with incident and transmitted LED illumination for bright, white and even illumination. All advantages of LED illumination can be found here: bright light, long lifetime, no heat development for the safety of user and living samples.

The transmitted light is implemented in a large microscope base with a minimum height: an easy and convenient manipulation of the sample is possible as the hands may rest on the table top. The microscope base is completely sealed to protect the illuminator from liquids that might be spilled. Fresh water samples can easily be evaluated without any risk. In case of checking a glass slide, Motic's "one-touch" sample clips help to fix the specimen.

The incident light is dedicated to non-transparent samples like minerals, fossils or plants. As incident and transmitted light can be regulated independently, illumination can be optimized for each specific sample. The cordless concept of the LED illumination with rechargeable batteries is ideal for field work activities; the large carrying handle as well as the light construction of the instrument suits even younger students.

Motics RED-Line stereo microscopes have combined reliable mechanics, superb optics and a user-friendly LED illumination. A fine combination that will deliver impressive image results for an enjoyable start into science.

# MOTICAM SERIES

EXCELLENT LIVE IMAGES FOR TEACHING AND CLASSROOM WORK

The individual situation in a classroom may be unique. To share positive image results nevertheless is a common teaching task. The combination of a RED-Line microscope with a member of the Moticam Series enables to display and to share excellent live images for presentations and discussions. The camera package also includes the easy-to-use Motic Images Plus 2.0 software which allows to save still images and to record videos, as well as many other edition options. Living samples thus can be evaluated in an appropriate way.

For a group work approach in classrooms, we have two options with Wi-Fi data transfer that may suit perfectly. The Moticam X, which allows the access of multiple tablets or computers, so one microscope as imaging source is sufficient to feed up to 6 student devices with images for homework; or the Moticam X2 which is the advanced version. The difference is that the Moticam X2 has its own battery, and it allows you to integrate it to your own network either via Wi-Fi or via Ethernet cable, allowing more users to be connected. Capture, edit and share your images with our free App MotiConnect.

Adapting a Moticam to your microscope is quite easy: the eyepiece adapters allow to use even a monocular model as an image source. Trinocular RED-Line microscopes already come with the necessary c-mount adapter for the photo port.

Discover the possibilities and benefits of connecting a Moticam camera onto your RED-Line microscope. Multiply your teaching options, improve teaching efficiency!

**Our Moticam selection suitable for you**

# MOTICAM S2 & T2

MONITOR YOUR PROGRESS WITH THESE TOUCH SCREEN TABLET CAMERAS AND CONVERT YOUR MICROSCOPE INTO A STANDALONE DIGITAL MICROSCOPE SYSTEM; WITHOUT THE NEED OF A COMPUTER

## S2 & T2 TABLET CAMERAS

Share the microscope experience with others around you - teachers or students - by easily mounting these tablet cameras on your microscope, and make your microscopy experience unique.

7" (Moticam S2) or 10.1" (Moticam T2) multi-touch screen tablet that run on Android operating system, and pre-loaded with Moticonnect T APP that allows to wirelessly share images with others via Bluetooth, Wi-Fi and HDMI connection.

In just one click you will be able to capture high-quality images, measure and edit them as well as record HD videos. All it takes is a touch of your finger!

# RED50X WI-FI DIGITAL MICROSCOPE

BASIC MICROSCOPE WITH INTEGRATED WI-FI CAMERA OF 1.3MP, WILL MAKE YOUR LESSONS INTERACTIVE AND ENJOYABLE

<b>Optical System</b>	Finite optical system, 160mm
<b>Observation Tube</b>	Monocular with built in digital X type Wi-Fi camera
<b>Inclination</b>	30° inclined, 360° rotating
<b>Camera sensor</b>	CMOS 1/3" - 1.3MP - 1280 x 1024 pixels
<b>Output</b>	Wi-Fi transmission up to 1.3MP
<b>Eyepieces</b>	WF10X/18mm
<b>Nosepiece</b>	Reversed triple revolving nosepiece with click stops
<b>Objective classification</b>	Achromatic objectives, DIN
<b>Objectives</b>	4X/0.10, 10X/0.25, 40X/0.65/S - Lockable
<b>Objective mounting thread</b>	W 4/5"x1/36" (RMS standard)
<b>Stage</b>	Gliding stage with "one-touch" sample holder
<b>Stage size</b>	Ø105mm
<b>Condenser</b>	Built in 0.65 N.A. with disc diaphragm
<b>Focus mechanism</b>	Coarse focusing system
<b>Z-axis movement</b>	8mm
<b>Illumination</b>	LED 20mA, 3.5V, 70mW with intensity control
<b>Power supply</b>	Charger 100V/240V (CE) and rechargeable batteries
