SMARTPHONE DIGISCOPING ADAPTER

RP SERIES RUGGED PROTECTION

Transform your smartphone into a super telephoto lens and combine the high quality camera and video functions of your smartphone with the power and legendary quality of a Kowa spotting scope or binocular to create an ultra compact, high quality super telephoto lens.

It couldn't be easier to start taking highly magnified images or video with your smartphone via the Kowa RP Series smartphone adapters.

Simply slot your smartphone into the highly protective adapter and screw on the appropriate adapter ring (sold separately) - that's all there is to it - then push the adapter over the eyepiece of your spotting scope and you're ready to digiscope - the whole process takes seconds.

EYEPIECE ADAPTER RINGS

To connect the adapter body to a spotting scope eyepiece or binocular you will need to purchase an additional Kowa Equip adapter ring.

The Kowa Equip series has a wide range of different sized adapter rings available to fit most Current Kowa spotting scope eyepieces and many other spotting scope brands too.

The Kowa RP series smartphone adapter is made from a tough polycarbonate material. The design is slim and sleek and yet offers a high level of protection to your smartphone.

1. Smartphone adapter
2. Adapter ring (sold separately)
3. Compatible eyepiece

WHICH SMARTPHONES?

Smartphone models are constantly updating so please visit our website at www.kowaproducts.com for the latest list of available smart phone adapters.

Kowa RP series smartphone adapters are available for many popular smartphone models from the major manufacturers.

If you don't see your smartphone model listed on our website, send an email to scope@kowaoptimed.com with the make and model of your smartphone and it may be possible to create a Kowa smartphone adapter for your specific model.

Please visit our website www.kowaproducts.com for a full listing of all available adapter rings, sizes and compatible products.
